

This prep will be quicker than normal prep to complete because you also need to take the time to learn the numbers and stages

## Prep 2- Schaffer's stages of attachment

Schaffer carried out a study on babies in Glasgow and from it developed his stages of attachment. You need to know the procedures and findings of Schaffer's 1964 study on Glasgow babies. Use pages 3-4 to complete the following activities.

### Activity one- Learning all the numbers from the study!

What are the following numbers?

How many babies from Glasgow did he use? \_\_\_\_\_

He visited them every month for how long? \_\_\_\_\_

At what age did he do his last visit? \_\_\_\_\_

You need to know these for prep question time!

### Findings

How many of the children(%) had a specific attachment by **7 months**? \_\_\_\_\_

How many had specific attachment by **10 months** (40 weeks)? \_\_\_\_\_

How many at **10 months** also had multiple attachment? \_\_\_\_\_

At **1 year** how many (%) had multiple attachments? \_\_\_\_\_

How many of them had five or more multiple attachment figures? \_\_\_\_\_

### Activity two-what are his stages and how do they link to his study?

a) Add in his stages/ages/ and a brief description of what is happening at each stage below

--	--	--	--

b) On the timeline below add on his 4 stages at the correct ages and then the % from his findings at the correct age-do you notice anything?

6 months old

Born

1 year old
